

A blood screening contains various types of results based on the type of blood work ordered. It can contain Chemistry - this measures blood glucose (sugar), electrolyte and fluid balance, kidney and liver function. Blood Chemistry is also known as "SMAC 23" or "Complete Metabolic Profile - CMP". A Complete Blood Count (CBC) measures iron, red and white blood cell count and platelet count. A CBC with Chemistry can be used to determine infection, inflammation as well as checking that body systems are functioning.

Bloomfield Health & Human Services is offering a CBC with Differential and Blood Chemistry Screening
